
UMAC CMS PACK & GO INSTRUCTIONS

2009-09-25, martin.stricker@gmail.com

Variables

=====

{appdir} = /var/www-umc
application installation directory
{appdb} = umcc
application MySQL database
{txpdb} = umctxp
blog MySQL database
{wikidb} = unimuscoll
wiki MySQL database

Pack & Go Instructions

=====

1. Review the section "Usernames & Passwords" of {appdir}/INSTALLATION.
All the necessary usernames and passwords should be available.
2. Export the MySQL databases {appdb} (UMAC CMS), {txpdb} (Newsblog, optional), {wikidb} (MediaWiki UMAC, optional) each into a file so that each file can be used as SQL-Importscript when installing the CMS on another server. Each file name should indicate the database name.

Example: [shell]: mysqldump --opt {appdb} > {appdb}.sql
[shell]: mysqldump --opt {txpdb} > {txpdb}.sql
[shell]: mysqldump --opt {wikidb} > {wikidb}.sql

3. Archive the contents of {appdir} with an archive program.

Example: [shell]: cd {appdir}
[shell]: tar cvzf umac.tgz *

4. Review the section "Files and Database Dumps" of {appdir}/INSTALLATION and adjust the file and archive names if necessary.
5. Gather all the files created so far for transport to the new location. Add {appdir}/INSTALLATION and maybe a note with additional and contact information.
